

1 TURF CHOICE FOR ATHLETIC FIELDS

THE CLEAN & GREEN NATURAL CHOICE

Athletic Sports Turf is a tough, beautiful and safe turf suitable for both Residential and Commercial applications.

- Extensive, Strong & Aggressive Rhizome System
- Great in Full Sun & Partial Shade
- Cold & Heat Tolerant - *Perfect for Colorado Weather*
- Fine & Medium Leaf with Dark Green Color
- Durable Surface for High Traffic & Relaxation
- Faster Recovery & Self-Healing
- Drought Tolerant & Pest Resistant

To obtain the necessary and optimal long-term performance provided with Korby's Athletic Sports Turf bluegrass blend, it is important to have a diverse mixture of complimentary, compatible and distinct varieties of grasses.

Recommended for: Athletic Fields, Front & Back Yards, Golf Courses, Parks and other Landscape projects where high traffic use, superior durability, density and safety are necessary. ***Durability not only for Athletes - but Kids & Pets!***

ATHLETIC SPORTS TURF

Bluegrass Blend

Our three bluegrass varieties are carefully selected and balanced to optimize the traits of each variety, also preventing one individual variety from degrading the overall superior performance of the turf mix.

Blend Varieties and Characteristics:

Hampton Kentucky Bluegrass: Nicknamed “The Root Monster” due to its standout deep and fibrous root production for improved drought tolerance. Hampton is a favorite of elite turfgrass sod producers and rated near the top in shear strength across multiple blends, mixtures and species at Cornell University. It also adds terrific winter color, excellent spring green-up and seedling vigor, drought tolerance and traffic performance with the highest rated horizontal shoot leaf growth habit.

Julius Kentucky Bluegrass: An excellent, elite variety of Kentucky Bluegrass for any athletic or sports application, Julius is an aggressive type of turf that can tolerate mow heights as low as 1/2". Julius has an aggressive rhizomatous shoot growth that forms a well-knit, durable, highly exceptional wear-tolerant turf. It is fine-bladed with a high to medium thatch that produces a cool hardy, persistent, attractive grass. Julius also exhibits a good drought tolerance, good leaf spot resistance and good disease resistance. Early spring green-up and a bright winter color are also desirable characteristics of this variety. In the 2001-2005 NTEP comparison trials, Julius scored a high 7.0 for dark green color on a scale of one to nine. Julius is adaptable to a wide range of soils and climatic conditions, and it is highly recommended for golf course fairways, tees, roughs and landscaping projects where high traffic use and superior durability is necessary.

Awesome Kentucky Bluegrass: An aggressive bluegrass that is perfect for adding to cool season turf grasses to maximize density and durability in athletic sports fields or landscaping projects. Its fine leaf texture makes Awesome a beautiful mix with other cool season turf grasses, and its dense growth habit crowds out any weed encroachment. From high to low traffic stress maintenance schedules, Awesome has excellent performance, excellent disease resistance and a very desirable lower growth habit. In the 2001-2005 National Trials, Awesome was top rated for dark green color at 7.3 and 7.0 for wear tolerance on a scale of one to nine. Out of six regions at trials, Awesome rated in the top first or second tier 5 times!
