

THE NEW GENERATION OF DROUGHT TOLERANT SOD

VorTex is our proprietary Texas hybrid Bluegrass blend that stands up to Colorado's summer sun and heat, as well as dry, cold winters! It is durable for use in both Residential and Commercial applications.

- Fine and Rich Green Color - *Similar to Kentucky Bluegrass*
- Up to 30% Water Savings - *Stays Greener with Less Water!*
- Great in Full Sun & Partial Shade
- Extensive, Strong & Aggressive Rhizome System
- Durable Surface for High Traffic & Relaxation
- Faster Recovery & Self-Healing

VorTex will out-perform most other grasses in non-irrigated cool season climates. Aggressive establishment with excellent recovery. Combines the extensive rhizomes, heat & drought resistance and water savings of Texas Bluegrass with the turf quality & density of a Kentucky Bluegrass.

Recommended for: Athletic Fields, Front & Back Yards, Golf Courses, Parks and other Landscape projects where high traffic use, superior durability, density and safety are necessary. *Excellent in low water use areas!*

VorTex *Texas Bluegrass Hybrid Blend*

Blend Characteristics: Very adaptable multi-use cool season grass for all semi-arid regions (except extreme NE and NW North America) that can be used in a wide range of soil types/conditions. Weed, disease and insect resistant. Low transplant shock. Easy sod establishment except for the coldest months of December/January. Fine to medium texture. Premium quality turf that has longer roots. Retains green color with less water during hot summer months.

- Studies indicate hybrids remain stress-free and green up to 30 days without water.
- Some studies have shown hybrids have remained green even after 14 days of continuous daily temperatures of 104° and nightly temperatures of 86° Fahrenheit.
- Up to 30% water savings possible over fescue and bluegrass
- Dry down period further encourages water savings
- Out-performs tall fescue and bluegrass in non-irrigated and cool season climates

What is a Texas hybrid?

The Texas Bluegrass Hybrid was created from the crossing of the Texas Bluegrass (*Poa arachnifera*) with Kentucky Bluegrass (*Poa pratensis*), creating the Texas Bluegrass Hybrid (aka Bluegrass Hybrid). One of the earlier and most familiar hybrids, it was originally introduced in the 90's. Since then, more hybrids have been made available; some with actual variety seed names and other proprietary types under their own unique, company branded trademark name. Korby Sod, LLC is pleased to offer our exclusive new generation Texas Bluegrass Hybrids, VORTEX (100% Texas Bluegrass hybrid).
