Athletic Sports Turf
Kentucky Bluegrass Blend

Blend Varieties and Characteristics:

Lunar Kentucky Bluegrass - An elite Kentucky bluegrass with deep, dark green color, fine-texture, durable density, and performs well in all cool-season and transition regions of Kentucky bluegrass use. Lunar exhibits good spring green up, improved heat tolerance and rated very high in Drought Tolerance (Dormancy) trials. This variety is great for use in sod production, athletic fields, golf turf blends and mixtures desiring a dark green color and elite performance. Lunar's dark green color, strong vigor and responsiveness allow it to complement and compete with perennial ryegrasses when used in high performance sports turf mixtures. This aggressiveness also helps out-compete weed species resulting in improved establishment and high-quality turf for various uses. Low mowing height and better fall color retention. Origin: State of Washington & State of Oregon.

Shannon Kentucky Bluegrass: Shannon Kentucky Bluegrass has an inherent vigor and responsiveness that speeds up knitting, sod formation, and ground cover density. With its quick germination and establishment, Shannon is a must-use ingredient for sod, athletic field, and golf turf blends and mixtures. Fast to recover and fast to green up, Shannon is a variety with an improved and darker green color, medium-fine texture, durable density, and improved heat tolerance.

Hampton Kentucky Bluegrass: Nicknamed "The Root Monster" due to its standout deep and fibrous root production for improved drought tolerance. Hampton is a favorite of elite turfgrass sod producers and rated near the top in shear strength across multiple blends, mixtures and species at Cornell University. It also adds terrific winter color, excellent spring green-up and seedling vigor, drought tolerance and traffic performance with the highest rated horizontal shoot leaf growth habit. Origin: State of Washington.

Fullback Kentucky Bluegrass: Fullback has excellent seedling vigor and establishment, spring green up, summer density and drought performance (wilting and dormancy), and low seed head expression. This Kentucky Bluegrass variety also has great winter color and is an outstanding competitor to Poa annua. Fullback Kentucky Bluegrass exhibits Super Elite performance across trials. State of Origin: Oregon & Washington

Recommended for:* Athletic Fields, Residential Front & Back Yards, Golf Courses, Parks and other Commercial Landscape projects where high traffic use, superior durability, density and safety are necessary. Durability not only for Athletes - *but Kids & Pets!
